1. Introduction

1.1 Document Purpose

This document defines the business requirements and scope for developing the **Travel Buddy System**. It outlines the functional requirements, non-functional requirements, business rules, and other constraints for building a platform that simplifies travel planning and enhances user experience.

1.2 Project Background

Currently, travelers rely on multiple websites, agents, or word-of-mouth to plan trips, compare packages, find local guides, and explore destinations. This leads to:

- Time-consuming research
- Lack of transparency in pricing
- Difficulty connecting with genuine tour guides or travel companies
- No central platform to compare packages, itineraries, or reviews

Travel Buddy aims to solve these issues by providing a unified online platform where travelers, travel companies, and tour guides can connect and interact seamlessly.

1.3 Goals of the Project

The main objective of **Travel Buddy** is to build an easy-to-use travel portal where:

- Travelers can explore destinations, compare tour packages, make bookings, and communicate with tour guides.

- Travel companies can list tour packages, set pricing, and manage bookings.
- Tour guides can connect with travelers and assist them during their journey.

1.4 Customers and Stakeholders

Customers:

- Travelers looking for tour packages
- Local and international travel companies
- Tour guides

Stakeholders:

- Travel agencies
 - Tourism boards
 - Local tour associations
 - Tourism industry partners
-

2. Business Requirements Overview

- Travel Buddy is a global web application targeting travel enthusiasts, with initial focus on domestic tourism.
 - Users include **Travelers**, **Travel Companies** Admin.
 - Travelers can browse destinations, compare packages, and book trips.
 - Travel companies can list and manage tour packages.
 - The entire system is managed and monitored by an **Administrator**.
-

3. Functional Requirements Overview

The Travel Buddy System consists of four core modules:

1. Traveler Module
2. Travel Company Module
3. Admin

4. Admin Module

3.1 Traveler Module

- Travelers can register and create a profile.
- Browse destinations, tour packages, itineraries, and prices.
- Compare two or more tour packages.
- Book a trip and make payments online.
- View booking status and receive notifications.
- Provide feedback or reviews after completing a trip.

3.2 Travel Company Module

- Travel companies can register and verify their business credentials.
- List new tour packages with details like itinerary, duration, price, and inclusions.
- Update, delete, or customize packages.
- View bookings and customer inquiries.
- Manage pricing.

3.4 Admin Module

- Admin can manage all users (travelers, guides, travel companies).
- Verify the authenticity of travel companies and guides.
- Monitor all transactions and bookings.
- Handle complaints, feedback, and system maintenance.

4. Non-functional Requirements

- The website should have a clean, modern, and professional UI/UX.
- The system should support multiple concurrent users and handle moderate traffic expected during academic demonstration
- Must follow general usability guidelines—easy navigation, clear labels, responsive design.
- System should complete key tasks with minimum steps.

- Ensure security of user data, personal information.
- Fast loading speed and high performance across devices.
